

Java Full Stack Developer

We are looking for multiple motivated and ambitious Java Full Stack Developers to work on exciting green field projects for our customers from the DACH region. We mostly work on projects for big banks and other financial institutions, but if you don't like the world of finance, we have other projects, too! As a consulting company specialized in enterprise development and business process modelling, we deliver projects for our clients and create amazing challenges for our consultants.

Your mission

As a Java Full Stack Developer, you have to :

- Understand software specifications and client's requirement
- Develop the web applications using Agile methodology
- Create tests to increase the quality of your solution
- Participate in code reviews, design meetings, scrum ceremonies and other team events

Your talent as a Java Full Stack Developer

- Experience in Enterprise Application Development using Java 11/17 & Spring Boot and Angular Framework
- Strong grasp of computer science fundamentals: database modelling, design patterns, Web Services, UML and algorithms
- Agile mindset and true team player
- Strong English communication skills, both written and verbal (German/Czech skills are of an advantage, but they are not mandatory)
- At least 2-3 years of professional developer experience

Nice-to-haves:

- Experience with process modelling (Camunda)
- Experience with open source rule engines

What can we offer?

- Competitive salary/MD rate
- Flexible working time
- Comfortable office in the heart of Prague Karlin & possibility to work from home
- A friendly and respectful team of colleagues
- Transparent culture
- An entrepreneurial environment where your initiatives are appreciated
